

Pick Up Mounted Signboard

Standard Specification – All Pickup Mounted Signboard Models

The pick-up mounted sign board consists of a 3.0m x 2.3m non corroding aluminium, long life yellow sign panel (**As P 7402 - ALTERNATIVE DESIGN**). A voltmeter to give visual indication of vehicle battery condition, durable 4-fold MS340 (340mm) halogen lights, with automatic dimming for night time use, Anti Luce clips and heavy duty galvanized steel construction framework. The sign face, wickets signs and supplementary plates are all DG3 reflective to comply with Chapter 8 requirements.

- **All models** are designed to use a minimal amount of space on the body of the pickup and allow for easy access to the load space. This enables the vehicle to be used for carrying other equipment while the signboard is still mounted to the vehicle.
- **All models** allow the signboard to be placed into the stowed position where the aerodynamic design helps reduce the amount of drag caused by fitting a signboard. This in turn saves on fuel usage and vehicle wear.
- **Demount models** can be removed from the vehicle without the aid of a forklift or lifting equipment. By using the jack legs, and removing the vehicles rear corner posts, the driver can quickly remove the system and drive away.
- **Fully remote models** - The signboard is deployed from the vehicle cab by a electro-hydraulic power pack operated from the cab. The driver is not required to leave the vehicle except to change signage.

Signs available in:

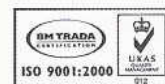

3 or 4 lane wickets sets complete with supplementary plates.
