

# BarrierGuard 800 Gate

The **BarrierGuard 800 Gate** is a 'safety barrier gate' as listed in the 'HA Accepted EN1317 Compliant Road Restraint Systems' and is a derivative of the high performance **BarrierGuard 800** system offering N2 Containment with a Working Width of W5. The system is also approved for H2 applications.

The gate is made up from 'gateposts', first gate sections and intermediate units. The 'gatepost' may be anchored or free, it is often anchored for permanent applications and free in temporary barrier installations, (the addition of a 'T' top allows the alternatives). The minimum opening is 6 metres and can be increased in modules of 6 metres.

Opening the gate is simple and speedy. Both gate pins are removed at the opening end, and one at the hinging end. The wheel sets are deployed with a 13mm square male socket drive located through holes in the barrier top. When the barrier feet are clear of the road surface the gate can be pushed in the desired direction.

Removing all four pins allows the gate section to be removed completely. Closing the gate is the reverse of opening, no special tools or lifting equipment are required.

The **BarrierGuard 800 Gate** is from a range of permanent and temporary barrier solutions from [Highway Care](http://www.highwaycare.co.uk).
