

# Temporary Plastic Barrier

- Suitable for T1 & T2 applications
- Positive crashworthy protection
- Safely re-directs errant vehicles
- Quickly installed - up to 180m per hour
- Straight and curved applications
- Heavy lifting equipment not required
- Certified as its own end treatment
- Internal steel frame
- Bright orange and white colours for clear visibility
- Fill level indicators for drive by inspection

**Temporary Plastic Barrier** is a galvanized steel framed plastic encased water filled barrier providing work zone protection to containment levels T1 & T2 (BS EN1317-1, 80km/h, 1300kg car at 8° & 15°). More than just a barricade or delineator, the system provides positive protection for operatives and motorists by preventing vehicle penetration into work areas, absorbing the collision energy and safely redirecting the errant vehicle. The system can be handled by 2 men and is easily and quickly deployed, allowing installation of up to 180m per hour without using a crane or heavy lifting equipment. The units are positioned, the connecting pins inserted and the units filled with water (after filling, the units can be disconnected and moved by fork lift). Fixing to the carriageway is not required. It can be installed to a horizontal radius of 12 metres and grades of up to 5%. The Temporary Plastic Barrier is also certified as its own end treatment, providing end on impact protection for vehicle occupants. The system is suitable for non trunk road use at road works, road closures, crowd control, car and motorcycle events.

- Size - 2000mm long x 530mm wide x 810mm high
- Weight - 65kg Empty, 610kg Full
- Water Ballast - 550 litres / unit
- Up to 70 units per load
