

TAU Temporary Crash Cushions

The **TAU** Temporary Crash Cushion provides speedily installed crash cushion protection where roadside hazards such as temporary barrier ramped terminals or isolated hazards are created during road works. The **TAU** system can be independently anchored in front of hazards or temporary steel and concrete barriers which are up to 700mm wide. Connections are available to the BarrierGuard 800 steel barrier system and some concrete barrier systems.

The **TAU** Temporary Crash Cushion is available in velocity ratings suitable for road speeds up to 110km/h. The crash cushion is pre-assembled and is quickly positioned and anchored. The systems can be installed using standard tools and a barrier rig or similar piece of equipment.

The **TAU** Temporary Crash Cushions can also provide permanent protection when casting a concrete base slab is not practical. A variety of anchoring options are available. Installation can be carried out by Highway Care Ltd or by trained installers throughout the UK.
